

Evaluation Criteria and Weighting Values	
Evaluation Criteria	Weighting Values
Quantitative Evaluation Criteria	
Acres of tributary watershed, runoff screened annually, runoff treated annually	
Acres of swale, parks/sports fields, and stabilized bank created	
Pounds of trash, and pollutants/nutrients removed annually	
Miles of pedestrian path created, and public and maintenance roads protected	
Pounds of soil erosion, and herbicide use eliminated annually	
Acre-feet of groundwater and potable water saved annually	
Flood risk reduction	
Environmental/habitat benefits	
Stormwater capture and use	
Education and outreach	
Qualitative Evaluation Criteria	
Reasonable Assurance Analysis	
Geographical Diversity	
Use of Public Land – Versus Use of Private	
Lands or Need to Purchase Land	
Permitting Requirements	
Environmental Impacts	
Construction and Capital Cost	
Annual Operation and Maintenance (O&M) costs	
Availability of Capital Funding	
Reliability of Future, On-going O&M Funding	
Other Evaluation Criteria
